
A mould to create cookiecutters Documentation

Release 0.0.1

Feb 22, 2018

Contents

Python Module Index

3

Create a cookiecutter template from an existing project directory

`mould.read_directory` (*project_directory*)

`mould.replace_directory_entries` (*directory_entries*, *replacements*)

Perform *replacements* substitutions on *DirectoryEntry* instances.

Also mention the cookiecutter thing? <https://docs.python.org/3.3/library/stdtypes.html#str.replace>

Specifically the path elements :param *directory_entries*: :param *replacements*: A dict where the key is the [value of the needle]

and the value

Returns

`mould.write_directory` (*directory_entries*, *target_directory*)

Parameters

- **directory_entries** – *DirectoryEntry* instances
- **target_directory** – The directory to write the mould to

Returns

`mould.read.read_directory` (*project_directory*)

`mould.read.read_file` (*file_path*)

m
